## ABSTRACT OF THE DISCLOSURE

Upon receiving e-mail, which is deprived of its attachment file due to capacity limitation of mail server 21a, MFP 11a transmits e-mail containing its own IP address and a transfer request for transferring the attachment file to the transmission source, MFP 14a, and other transmission destinations, MFP 12a and 13a. Of those MFP which received said e-mail, MFP 12a is accessible to MFP 11a via network 30 and transmits the attachment file to MFP 11a and MFP 11a prints out the attachment file upon receiving it.
